FACIAL ATTENDANCE

WORKFORCE OPERATIONS

# Digital Facial Attendance System

A secure, camera-powered attendance workspace for employee enrollment, daily recognition, policy decisions, and controlled reporting.

CLIENT SOLUTION OVERVIEW

Prepared for client review | July 2026

# A simpler way to manage daily attendance

One focused application brings recognition, records, policy rules, and admin decisions together.

01

## Faster attendance

Employees are recognized from a connected camera, reducing repetitive manual entry at the attendance point.

02

## Clear decisions

Daily status, short-day review, and overtime are calculated from consistent, visible business rules.

03

## Controlled access

Admin and standard-user roles separate daily scanning from sensitive employee and policy controls.

04

## Local data ownership

Employees, users, settings, attendance, and decisions remain in a client-controlled Excel workbook.

# One system, from enrollment to final decision

The workflow keeps daily operations simple while preserving admin control over exceptions.

**Result: a traceable attendance day with clear ownership of every exception.**

# Designed for action, not just reporting

The home screen surfaces the workforce signals and next actions that matter today.

## ● Immediate visibility

Six concise indicators show workforce readiness, attendance outcomes, and pending review.

## ● Fast access

Primary scanner and employee-registration actions remain visible without searching through menus.

## ● Exception focus

Today summary and recent activity help admins identify missing scans and resolve short days.

# A guided two-step registration experience

Employee records and biometric references stay connected through a clear, deliberate workflow.

1

**Save employee details**

Capture the core workforce record first so every face reference is linked to a unique employee ID.

|                      |                      |
|----------------------|----------------------|
| Employee code        | Full name            |
| <input type="text"/> | <input type="text"/> |
| Department           | Status               |
| <input type="text"/> | <input type="text"/> |

2

**Capture one clear face**

START CAMERA

CAPTURE FACE

One person in frame  
Front-facing and well lit  
Browser camera permission required

## Built to stay on throughout the working day

Continuous monitoring recognizes eligible employees while configurable cooldown prevents rapid duplicate scans.

# Consistent rules with human control where needed

Daily duration is measured from the first recognition timestamp to the last timestamp for that employee.

# Exceptions remain visible and accountable

Admin-only controls provide a final decision path without changing the underlying scan history.

## FINAL DECISION QUEUE

### Employee attendance review

**Jordan Smith**

EMP-014 | Operations

NEEDS REVIEW

First 09:06

Last 11:48

Duration 2h 42m

Final status: Absent

SAVE DECISION

#### ● Employee master

Create, edit, activate, deactivate, delete, and maintain face registration.

#### ● User management

Create software users and assign admin or standard access roles.

#### ● Settings control

Adjust recognition cooldown while keeping attendance rules transparent.

# Excel-only persistence, by design

The solution avoids an external database while keeping operational records structured and locally controlled.

No external database | Simple backup | Client-controlled files

# One interface across operational screens

The shared layout adapts from mobile attendance checks to desktop administration and large displays.

# Secure operation starts with clear ownership

The application includes practical controls today, supported by a straightforward client go-live checklist.

## BUILT INTO THE APPLICATION

- 1 Password hashes instead of stored plain-text passwords
- 2 Admin-only employee, user, settings, and decision controls
- 3 Active and inactive access status for employees and users
- 4 Clean error handling for workbook locks and invalid actions
- 5 Local storage of attendance records and face references

## CLIENT GO-LIVE CHECKLIST

- OK Change the default admin password before use
- OK Define a regular workbook and face-image backup routine
- OK Keep the workbook closed while the application writes records
- OK Restrict workstation and folder access to authorized personnel
- OK Use HTTPS when exposing camera access beyond localhost

## A practical path to client adoption

Start with policy confirmation, validate on a pilot workstation, then move into controlled daily use.

01

### Confirm

Attendance thresholds, cooldown, roles, and review ownership

02

### Pilot

Register a small employee group and validate camera positioning

03

### Train

Brief admins on enrollment, decisions, backup, and recovery

04

### Go live

Run continuously, monitor exceptions, and review adoption

**Ready for a focused client pilot and policy review.**
